

ARS Landscaping Splash Pad Surfacing Sub-base Requirements

1) CONCRETE SLAB/ASPHALT REQUIREMENTS

- 4" thickness minimum
- Concrete Slab/Asphalt must be installed to experience positive drainage.
- Concrete slab/Asphalt is to cure for 14 days prior to safety surface being installed. Anytime less than 14 days, will require approval by contractor.
- Once concrete/ asphalt has cured, cured surface is to be properly cleaned as needed.
- Must be completed prior to ARS Surface being installed.

It is important that the Concrete slab/Asphalt subbase is to be installed to perfection to help ensure a quality PIP Install. If another company provides install then ARS is not responsible for any inaccuracies or defects that arise within the concrete slab/asphalt subbase. It is the contractor's responsibility to confirm accuracy of work performed by others.
